

How to Replace Lamp Shades Styrene: A DIY Guide for Homeowners

In this Fenchel Shades blog, we'll guide you step-by-step on how to replace lamp shades styrene at home. Whether you're updating vintage shades or [chandelier lamp shades](#), this covers everything you need to know. Also, learn what tools and materials to use, how to cut and attach new styrene, and how to care for your refreshed lampshade. We'll also discuss some common FAQs about lampshade repairs. Let's bring your old shades back to life!

[Lampshades](#) are more than just covers for light bulbs; they offer warmth, color, and personality to your house. However, with time, they begin to reveal their age. The inner layer, known as styrene, frequently becomes yellow, fractured, or flimsy. Instead of discarding your old shade, you can easily repair it with a new piece of styrene!

Step-by-Step Process: How to Replace Lamp Shades Styrene

Let's get into the fun part! Here's how to fix up your lampshade, step by step.

Step 1: Remove the Old Styrene

Carefully peel off the old fabric or paper from your lampshade. Underneath, you'll see the styrene. Gently pull or cut it off the frame. Save the frame — that's what you'll rebuild on.

If you're working with [vintage lamp shades](#), take your time so you don't bend or break the frame.

Step 2: Measure and Cut the New Styrene

If your old styrene is still in one piece, use it as a pattern. Lay it flat and trace it onto your new styrene sheet.

No pattern? No problem. Wrap some paper around the lampshade frame and mark where it overlaps. This gives you the right size and shape.

Cut the new styrene using scissors or a rotary cutter.

Step 3: Attach the Fabric or Paper

Now, place your fabric or paper face down on a table. Spray adhesive onto the styrene's smooth side and place it sticky-side down onto the fabric. Smooth out wrinkles with your hands or a ruler.

Want something special? Go for [printed lampshades](#) with fun designs or a personal touch.

Step 4: Tuck and Seal the Edges

Fold the fabric or paper over the top and bottom of the frame and glue it down. This gives your shade a clean, finished look.

This step can take a bit of patience, especially with curved, [round lamp shades](#) or small chandelier shades.

Where to Get LampShade Styrene and Materials

Need quality styrene sheets or supplies? Fenchel Shades is your one-stop shop for:

- Pre-cut or custom styrene
