What Is Somnol 7.5mg (Zopiclone) Used For?

Somnol 7.5mg is prescribed primarily to treat:

- Difficulty falling asleep (initial insomnia)
- Waking up frequently during the night
- Short-term insomnia related to stress or life changes
- Disrupted sleep cycles from travel, shift work, or anxiety

Zopiclone belongs to a class of medicines called non-benzodiazepine hypnotics. It works by affecting brain chemicals that may be unbalanced in people with sleep problems, helping to calm the nervous system and initiate sleep naturally.
